## Abstracts

A point of sale terminal (POS terminal) is an electronic device used to process card payments at retail locations. A POS terminal generally reads the information off a customer's credit or debit card, checks whether the funds in a customer's bank account are sufficient, transfers the funds from the customer's account to the seller's account and records the transaction and prints a receipt.

### SCOPE OF THE REPORT:

This report focuses on the Point Of Sale (Pos) Terminal in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The current trend is away from traditional proprietary hardware and toward software-based POS systems that can be loaded into a tablet or other mobile device. To stay ahead of the curve, POS terminal makers are introducing their own versions of portable and mobile POS devices. Such devices can be seen at busy retail stores and restaurants where owners are cognizant of the fact that customers generally do not like waiting around to pay for a product or meal. Price, function and user-friendliness are important criteria for POS system purchasers. Extremely important in the growing interconnected world is the security of the systems. Some high-profile hacks of customer data have occurred through POS terminals that did not have updated operating systems.

The worldwide market for Point Of Sale (Pos) Terminal is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
