According to our (Global Info Research) latest study, the global Point Source Carbon Capture Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Point Source Carbon Capture Machines, which means extracting carbon dioxide directly from the air, is based on a series of chemical reactions such as adsorption, and then storing it safely and permanently. The only reasonable method of disposal is geological storage, which is being used by many companies to combat the current state of global warming in order to meet the net-zero emission targets of the Paris Agreement. The captured CO<sub>2</sub> can also be used in agriculture, food processing or combined with hydrogen to produce synthetic fuels.
