According to our (Global Info Research) latest study, the global Point Source Carbon Capture System market size was valued at US\$ 5045 million in 2025 and is forecast to a readjusted size of US\$ 8215 million by 2032 with a CAGR of 7.3% during review period.

Point Source Carbon Capture System is an integrated industrial system designed to capture carbon dioxide directly from concentrated emission sources such as power plants, cement kilns, steel mills, and chemical facilities before the CO₂ is released into the atmosphere. The system typically employs technologies such as post-combustion, pre-combustion, or oxy-fuel capture to separate CO₂ from flue gases. Upstream, it relies on capture solvents or sorbents, membranes, compressors, heat-exchange equipment, and process control systems; downstream, the captured CO₂ is compressed and conditioned for transport, utilization, or permanent storage within CCUS value chains, supporting industrial decarbonization and emissions-reduction targets.
