## Abstracts

The global Point Type Infrared Flame Detector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Point-type infrared flame detectors have the characteristics of high sensitivity, strong anti-interference ability, and easy installation and maintenance. Point-type infrared flame detectors are equipment used for fire warning and alarm, not fire extinguishing equipment. It detects the presence of flames early, providing rapid fire warning and protection.

A point type infrared flame detector is a fire alarm device that uses infrared technology to detect infrared radiation produced by combustion. The point type infrared flame detector contains an infrared sensor and an electronic signal processor. When the flame is generated, the infrared radiation generated by combustion will be detected by the infrared sensor. The sensor converts the radiation into an electrical signal and analyzes it through the electronic processor. Judgment, if enough infrared radiation is detected that matches the characteristics of a flame, the detector will trigger a fire alarm.
