According to our (Global Info Research) latest study, the global Polar Plate Curing Drying Chamber market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Polar Plate Curing Drying Chamber is an important equipment used in battery production. After filling or squeezing the lead paste, the lead acid battery plate loses water in the curing chamber at a certain temperature and humidity. The original plasticity of the lead paste coagulates into a microporous and uniform porous solid process, which is an important process of the final molding of the lead acid battery plate. The cured plate is called #####raw plate#####.
