Abstracts

According to our (Global Info Research) latest study, the global Polarization Diversity Receiver market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Polarization diversity receivers can be used as receivers in fiber-optic interferometers, which are susceptible to polarization fading due to random birefringence changes. The device contains three independently polarized PIN diodes, ensuring high interference visibility for at least one output. This approach eliminates polarization fading in fiber-optic interferometers without concomitant reduction in signal-to-noise ratio.
