Abstracts

The global Polarizer for OLED market size is expected to reach \$ 8129 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

Polarizer for OLED is a key optical film material used in OLED display panels, usually composed of linear polarizer, quarter wave plate, protective film, compensation film, pressure-sensitive adhesive, release film, and surface treatment layers such as low reflection, anti glare, and hardening. Among them, circular polarizer is the most typical structure in OLED display. Its main function is to suppress the reflection of external light by metal electrodes and internal film layers in OLED panels, improve black state performance, contrast, outdoor readability, and display clarity. OLED polarizing film is widely used in fields such as smartphones, OLED TVs, tablets, laptops, car displays, wearable devices, industrial control displays, and commercial displays. It requires high thinning, low reflection, high transmittance, bending resistance, high temperature resistance, moisture resistance, and long-term reliability. In 2025, global Polarizer for OLED production reached approximately 172 M Sq m, with an average global market price of around US\$ 17.62 per Sq m.

Polarizer for OLED is a niche category with strong growth potential and high unit price in display panel polarizing film. The demand side mainly comes from smartphone AMOLED screens, OLED TVs IT OLED? Vehicle mounted OLED and wearable devices, among which mobile OLED is still the largest application, OLED TV contributes to a large area demand, while IT and vehicle mounted OLED drive the upgrade of high durability, low reflection, thinning, and high reliability products. With the OLED transformation of foldable phones, tablets, and laptops, the multi screen transformation of car cabins, and the upgrade of high-end televisions, the demand for OLED polarizing films will continue to grow. However, ordinary mobile phone OLED polarizing films are

facing downward pressure on prices and panel manufacturers to reduce costs. The future market opportunities mainly focus on flexible OLED ultra-thin polarizers, low reflection circular polarizers, automotive weather resistant OLED polarizers, IT OLED high uniformity polarizers, foldable and bending resistant polarizers, as well as low-power and high transmittance product upgrades competing with non polarizing technology.
