## Abstracts

According to our (Global Info Research) latest study, the global Polarizer Film market size was valued at USD 13860 million in 2023 and is forecast to a readjusted size of USD 23810 million by 2030 with a CAGR of 8.0% during review period.

Polarizer Film or Polarizing film is made by dyeing film (mainly polyvinyl alcohol (PVA)) or by iodine being adsorbed onto its surface, then stretching and orientating it. This gives the film polarization characteristics that allow only light with a certain oscillation direction to pass through it. Furthermore, in order to secure mechanical strength of the film, backing materials such as a TAC film or a protective film is laminated to it.

Polarizing film is given various kinds of treatment. The film itself is also required to have functions to control reflection, stain and light leakage. Some types of LCDs, touch panels, or organic EL displays also require a product made by laminating a retardation film to the polarizing film.

Nitto, Sumitomo and LG Chem are the top 3 manufacturers of Polarizer Film, with about 71% market shares.

The Global Info Research report includes an overview of the development of the Polarizer Film industry chain, the market status of LCD Displays (TFT Type, TN Type), OLED Displays (TFT Type, TN Type), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Polarizer Film.
