Abstracts

The polarizing beam splitting cube for laser is made of a pair of UV fused silica right-angle prisms glued together. The inclined surface of a right-angle prism is coated with a spectroscopic film designed for the working wavelength. The incident light is split into two orthogonal linearly polarized beams, p-polarized light is transmitted, and s-polarized light is reflected. Each surface of the cube is coated with a V-shaped dielectric film to minimize surface reflection loss.

According to our (Global Info Research) latest study, the global Polarizing Beam Splitter Cube for Laser market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
