The global Pole Laser Welding Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Pole laser welding machine is a kind of equipment that uses pole laser beam for welding. Pole laser welding is a special form of laser welding, and the beam spot shape of the laser beam is pole shaped (or called radial polarization). The light intensity of this laser beam is higher in the transverse direction and lower in the longitudinal direction, which makes the energy distribution characteristics of welding different from the traditional laser welding. In the traditional laser welding, the commonly used laser beam shape is Gaussian beam, and its light intensity is evenly distributed in the transverse and longitudinal directions. The pole laser beam used by the pole laser welding machine focuses more energy in the transverse direction, thus producing some special effects and advantages in the welding process: depth width ratio: pole laser welding can achieve a higher depth width ratio, that is, the depth of the weld is larger than the width. This is very useful in certain applications, such as when welding workpieces with larger thicknesses or when there are high requirements for weld quality. Suppress weld defects: the energy distribution characteristics of pole laser welding can help suppress some weld defects that may occur in the welding process, such as insufficient fusion, porosity and other problems. Optimization of penetration: Since the laser energy is more concentrated at the welding focus, pole laser welding can achieve better penetration control, thus improving the quality of the weld. Pole laser welding machine has certain advantages in specific applications, especially in the case of welding workpieces with high aspect ratio or requiring high welding quality. However, it also has some limitations, as the characteristics of transverse light intensity distribution may not be applicable to all types of welding tasks. Therefore, when selecting laser welding equipment, it is necessary to determine which type of laser beam to use according to the specific

welding needs and workpiece characteristics.
