## Abstracts

The motor drives the sponge or wool polishing disc installed on the polishing machine to rotate at high speed. Because the polishing disc and the polishing agent work together and rub against the surface to be polished, the purpose of removing paint pollution, oxide layer and shallow marks can be achieved. The rotational speed of the polishing disc is generally 1500-3000 r/min, mostly infinitely variable, and can be adjusted at any time according to needs during construction.
