According to our (Global Info Research) latest study, the global Polishing Pad Cleaning Fluid market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Polishing pad cleaning fluid is a liquid used to clean polishing pads. Its main function is to remove impurities such as grinding debris, polishing fluid residues, and metal ions on the surface of the polishing pad, prolong the service life of the polishing pad, and improve the polishing effect and quality. The ingredients of polishing pad cleaning fluid generally include water, organic solvents, surfactants, buffers, chelating agents, etc. The selection of polishing pad cleaning fluid should be matched according to the material, porosity, hardness, polishing object and other factors of the polishing pad to achieve the best cleaning effect. The methods of using polishing pad cleaning fluid generally include manual cleaning, mechanical cleaning and ultrasonic cleaning. The cleaned polishing pad should be stored properly to avoid direct sunlight, high temperature, high humidity, pressure and other unfavorable factors.
