Plastic waste management service is a collective term for various approaches and strategies used to recycle plastic materials that would otherwise be dumped into landfills, or bodies of water, or otherwise contaminate the environment. The idea behind this type of waste management is to utilize those discarded materials to manufacture new plastic products without the need to actually generate additional plastic materials. Doing so can help lower production costs as well as protect the environment.

With shifting preference towards recycled plastic, demand for recycled plastic is anticipated to increase, which in turn, will drive the global plastic waste management market. Various food & beverage companies are focusing on increasing the amount of recycled plastic in their bottles as part of their new sustainable strategy.
