## Abstracts

Poly Propylene Carbonate Polyols are designed to replace conventional petroleum-based polyether, polyester and polycarbonate polyols. The polyols are based on the copolymerization of carbon dioxide (CO<sub>2</sub>) and epoxides, and the resulting products contain more than 40% CO<sub>2</sub> by weight. The use of waste CO<sub>2</sub> as a significant raw material yields a product with an extremely low carbon footprint. In addition, since waste CO<sub>2</sub> is significantly lower in cost than conventional petroleum-based raw materials, polyol manufacturing costs will be favorable compared to conventional polyols when produced at full commercial scale.
