Abstracts

The global Polyacrylic Resin III market size is expected to reach \$ 44.63 million by 2032, rising at a market growth of 4.3% CAGR during the forecast period (2026-2032).

Polyacrylic Resin III is a polymeric pharmaceutical excipient?specifically, a copolymer of methacrylic acid and methyl methacrylate?equivalent to Copolymer Type B as defined in the *United States Pharmacopeia* (USP). It presents as a white powder and functions as an anionic enteric material; it dissolves in environments with a pH of 6.5 or higher and is commonly utilized in pharmaceutical enteric coating, microencapsulation film formation, and the preparation of sustained- and controlled-release formulations.

The core upstream raw materials include methacrylic acid and methyl methacrylate. As typical acrylic derivatives, their supply is influenced by propylene output from oil refineries and by crude oil prices. The core competency of midstream manufacturers lies in controlling the copolymerization ratio and regulating molecular weight distribution. Downstream, the product primarily flows to pharmaceutical enterprises.

There is a significant disparity between domestic and international prices for Polyacrylic Resin III; for instance, the average price for Evonik's EUDRAGIT S 100 product is approximately \$52.13/kg, whereas prices for domestic products typically range between \$10 and \$15/kg. The industry's gross profit margin hovers around 30%.

This report studies the global Polyacrylic Resin III production, demand, key manufacturers, and key regions.
