Abstracts

The global Polyamic Acid Solution market size is expected to reach \$ 102 million by 2032, rising at a market growth of 8.8% CAGR during the forecast period (2026-2032).

In 2025, global polyamic acid solution production reached approximately 6072 tons, the average price is 9000 usd/ton. Polyamic acid solution is a key intermediate for preparing polyimide materials. It is a polymer solution formed by polycondensation of diamine monomer and dianhydride monomer in a specific solvent. As a precursor of polyimide, its value lies in its ability to be molded by relatively simple solution processing methods (such as spin coating, spray coating or tape casting), and then converted into polyimide products with excellent final properties by heat treatment or chemical treatment.

The annual production capacity of a single polyamic acid solution production line is typically 1000-1500 tons/year, with a gross profit margin of around 30%.

This report studies the global Polyamic Acid Solution production, demand, key manufacturers, and key regions.
