According to our (Global Info Research) latest study, the global Polyamide market size was valued at USD 24320 million in 2023 and is forecast to a readjusted size of USD 28330 million by 2030 with a CAGR of 2.2% during review period.

A polyamide is a macromolecule with repeating units linked by amide bonds. Polyamides occur both naturally and artificially. Examples of naturally occurring polyamides are proteins, such as wool and silk. Artificially made polyamides can be made through step-growth polymerization or solid-phase synthesis yielding materials such as nylons, aramids, and sodium poly(aspartate). Synthetic polyamides are commonly used in textiles, automotive applications, carpets and sportswear due to their high durability and strength. The transportation manufacturing industry is the major consumer, accounting for 35% of polyamide (PA) consumption.

Engineering plastics segment is estimated to account for the largest share of the polyamide market in 2018. Polyamide engineering plastics are mostly used in automotive sector to make various parts such as radiator fans, speedometer gears, fuel tank, oil filter housing, and others. Automotive is the largest end-use segment for polyamide engineering plastics, followed by electricals & electronics end-use segment. Automotive is one of the most important market segments for polyamides, especially in the emerging economies. Emerging economies are increasingly investing in sectors such as infrastructure development, chemical industries, and automotive. This is expected to fuel the growth of the polyamide market in the automobile segment.
