According to our (Global Info Research) latest study, the global Polyamide (PA) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Polyamide is a polymer with versatile properties and high demand in various end user segments such as automotives, textile, electronics, machinery, packaging and coatings among others. Polyamides occur naturally in form of wool, silk among others and can be synthesized artificially. Nylon, polyamide 6 and aramid are amongst artificially made polyamides. Artificial polyamides exhibit properties such as resistance to wear, good mechanical properties, low permeability to gases and chemical resistance. Bio-based polyamides are gaining demand in market owing to its eco- friendly nature.

Growing automotive industry in developed and developing countries is expected to drive the polyamide market. Polyamides are preferred by automotive manufactures due to their high performance at low cost. Owing to current rise in raw materials prices in automotive industry, manufacturers are shifting towards polyamides for various applications such as coatings and films. The growth in automotive industry is due to the rising disposable income of consumers and increase in transportation activities across the world. Increasing demand from applications in electronics and coatings industry is expected to drive the market. Increase in the construction activities and rising population are major driving factors for electronics and coatings industry. Low cost of production and high performance factors such as chemical & wear resistance and insulation makes polyamide ideal choice to be used in electrical and electronic applications.
