According to our (Global Info Research) latest study, the global Polyamidoamine (PAMAM) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Polyamidoamine (PAMAM) is a type of dendrimer, which is a highly branched, spherical polymer with a high degree of symmetry. PAMAM dendrimers are made up of an ethylenediamine core that is linked to successive layers of amidoamine monomers, resulting in a three-dimensional structure with a large number of surface functional groups. PAMAM dendrimers have been extensively studied for a variety of applications due to their unique properties, including their ability to encapsulate drugs and other molecules, as well as their ability to penetrate cell membranes. They have been explored as drug delivery systems, gene delivery vectors, imaging agents, and catalysts, among other uses.
