Abstracts

According to our (Global Info Research) latest study, the global Polybenzimidazole Fiber market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Polybenzimidazole fibers are a class of extremely heat-resistant synthetic fibers. They are formed from completely aromatic polyamides. They are fibers in which the fiber-forming substance is a long-chain aromatic polymer having recurring imidazole groups as one of the main structural repeat units in the polymer backbone.

PBI was developed by the United States military in the beginning. The industrial process to fabricate PBI is complicated requiring high technology. Hence, the PBI industry is a highly monopolized industry that there was once only a single company located in United States who can synthesize PBI polymer from monomers. Currently, PBI Performance Products is still the key player in the industry, while new players have entered into the market in recent years. Polybenzimidazoles (PBI) is high-performance engineering plastic for the unique properties such as: excellent thermal stability, broad chemical resistance and unique compatibility with certain other polymers. Therefore, it has a wide range of potential applications covering aerospace, industrial, petrochemical, semiconductor, membrane and coating areas. However, since the cost is not affordable for many products, PBI is mainly used in the irreplaceable fields or the industry of strict requirement regardless of cost.

The Global Info Research report includes an overview of the development of the Polybenzimidazole Fiber industry chain, the market status of Aerospace & Defense (PBI Filament, PBI Staple Fiber), Automotive (PBI Filament, PBI Staple Fiber), and key
