Abstracts

According to our (Global Info Research) latest study, the global Polycarbonate Granules market size was valued at US\$ 16052 million in 2025 and is forecast to a readjusted size of US\$ 23331 million by 2032 with a CAGR of 5.5% during review period.

In 2025, global sales of polycarbonate granules reached 6.5 million tons, with an average selling price of US\$2,400 per ton. Polycarbonate granules are a transparent thermoplastic engineering plastic produced through a polycondensation reaction using bisphenol A (BPA) and carbonate raw materials as the core components. They possess high strength, high transparency, good heat resistance, and impact resistance, and can be used in injection molding, extrusion, and film processing. They are widely used in electronic and electrical housings, optical lenses, automotive parts, building materials, and medical equipment.

Upstream raw materials mainly include BPA, phosgene or diester-based chemical intermediates and additives. Downstream suppliers primarily include plastic product manufacturers, electronic equipment manufacturers, and automotive and building material companies. In the future, with increasing demand for lightweight, transparent, and high-performance materials, polycarbonate granules will develop towards higher fluidity, higher temperature resistance, and environmental recyclability. The industry's total capacity is approximately 8 million tons per year, with a gross profit margin of approximately 28%. Downstream consumption is highest in electronics and automotive parts, followed by construction and medical applications; BPA and diester raw materials account for the largest share of upstream material consumption. On the demand side, with the increasing trends of smart electronics, lightweighting of automobiles and transparency in building decoration, the global polycarbonate pellet market has

maintained steady growth. At the same time, environmental regulations are driving the development of recyclable polycarbonate, bringing continuous innovation and business expansion opportunities to the industry.

The polycarbonate pellet market is showing a steady growth trend, driven primarily by the continued demand for high-performance engineering plastics from the electronics, automotive, and construction industries. With the widespread adoption of smartphones, tablets, and wearable devices, the use of transparent, high-strength, and impact-resistant polycarbonate materials in casings, display components, and structural parts continues to increase. Simultaneously, the trend towards lightweighting in the automotive industry is driving the widespread application of polycarbonate in dashboards, lighting fixtures, and interior and exterior trim, replacing some metals and traditional plastics to improve fuel efficiency and meet environmental requirements. The demand for transparent and weather-resistant materials in the construction sector also provides robust market support for polycarbonate pellets.

In terms of market competition, the industry is highly concentrated, with leading companies possessing significant advantages in raw material supply, technical formulations, and downstream channels, while small and medium-sized enterprises mainly rely on regional markets or specific applications. In the future, environmental regulations promoting recyclable and low-volatile polycarbonates, as well as the development of products with high fluidity, high temperature resistance, and high transparency, will become new growth points for the industry. Meanwhile, emerging Asian markets, especially China, India, and Southeast Asia, will become important engines for global polycarbonate pellet growth due to industrialization and the expansion of the consumer electronics market.

Overall, technological upgrades and diversified downstream demand will continue to drive the steady expansion of the polycarbonate pellet market.
