According to our (Global Info Research) latest study, the global Polycarboxylate Concrete Admixture market size was valued at USD 5829.9 million in 2023 and is forecast to a readjusted size of USD 6758.6 million by 2030 with a CAGR of 2.1% during review period.

The term “polycarboxylate” actually applies to a very large family of polymers, which chemists can design to impart a special performance to concrete mixtures. Subsequent to the introduction of so-called general purpose PCE superplasticizers, new PCE products have been developed especially designed to provide high early strength and different levels of slump retention, as well as provide different capabilities to manage air contents in concrete. Polycarboxylate concrete admixture mainly refers to polycarboxylate superplasticizer.

Polycarboxylate ether superplasticizer is the third-generation concrete superplasticizer, which owns unique characteristics such as excellent water-reducing rate, high strength and compactness, good low ability, low viscosity, convenient operation, good self-leveling and environmental friendly etc. It is widely applied in the early strength, high strength concrete, flowing concrete, self-compacting concrete, pumping concrete, high-grade concrete and high-performance concrete.

Sika, Sobute New Material and KZJ New Materials occupy for the largest share of the market. China is the key production area of polycarboxylate concrete admixtures, with a market share of 80%, followed by India and Europe, which have a similar market share of between 4% and 5%. In terms of product types, TPEG and HPEG occupy the majority market share of polycarboxylate concrete admixtures, which are about 45%

and 42% separately. In terms of product applications, commercial concrete occupies for the majority of the market at 92%.
