Polycrystalline Diamond (PCD) milling cutter is an industrial tool whose blade is made of polycrystalline diamond. Polycrystalline diamond is an artificial super-hard material, which is made of many small diamond particles sintered through high temperature and high pressure. It has very high hardness, wear resistance and heat resistance, making it suitable for processing high hardness materials and complex workpieces. Excellent performance. PCD milling cutters are usually used for high-precision machining, such as in aerospace, automobile manufacturing, mold processing and other fields, because they can provide efficient cutting speed and good processing surface quality, reducing processing time and cost. Such as Element six's Syndite series and Sumitomo Electric's DA series.
