Abstracts

Polycrystalline Diamond Cutting Tool is short for PCD cutting tool. Polycrystalline Diamond (PCD) is a synthetic diamond product that is produced by sintering together selected diamond particles with a metal matrix, using sophisticated technology. The diamond and matrix, when sintered together under high temperatures and pressures, creates a PCD tool blank that is high in uniform hardness and is abrasive resistant in all directions. This PCD diamond layer is then bonded to a tungsten carbide substrate, which provides strength and a brazable base to permit bonding to other metals.

According to our (Global Info Research) latest study, the global Polycrystalline Diamond Tool market size was valued at US\$ 999 million in 2023 and is forecast to a readjusted size of USD 1357 million by 2030 with a CAGR of 4.9% during review period.
