Abstracts

According to our (Global Info Research) latest study, the global Polycyclohexylene Dimethylene Terephthalate market size was valued at USD 186.2 million in 2022 and is forecast to a readjusted size of USD 234.5 million by 2029 with a CAGR of 3.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

PCT resin is a high temperature resistant, semi-crystalline thermoplastic with properties similar to polyethylene terephthalate (PET) and polybutylene terephthalate (PBT). It has the strength and toughness of PBT, and its heat resistance is better than that of PET. Although the heat resistance of PCT is lower than that of polyphenylene sulfide (PPS), high temperature liquid crystal polymer (LCPS) and high temperature polyamide, it is higher than that of medium temperature liquid crystal polymer and other polyesters. However, since PCT also has good toughness, thermal stability, easy processability, chemical resistance and low moisture absorption, it has little effect on the mechanical properties, dimensional stability and processability of PCT under humid conditions. Therefore, PCT can compete with many polymers such as PPS, LCPS, and high-temperature polyamides. PCT has good chemical resistance to cleaning solvents, such as acetone, methyl ethyl ketone, ethanol and aromatic solvents.
