## Abstracts

The global Polycyclohexylene Dimethylene Terephthalate market size is expected to reach \$ 234.5 million by 2029, rising at a market growth of 3.3% CAGR during the forecast period (2023-2029).

PCT resin is a high temperature resistant, semi-crystalline thermoplastic with properties similar to polyethylene terephthalate (PET) and polybutylene terephthalate (PBT). It has the strength and toughness of PBT, and its heat resistance is better than that of PET. Although the heat resistance of PCT is lower than that of polyphenylene sulfide (PPS), high temperature liquid crystal polymer (LCPS) and high temperature polyamide, it is higher than that of medium temperature liquid crystal polymer and other polyesters. However, since PCT also has good toughness, thermal stability, easy processability, chemical resistance and low moisture absorption, it has little effect on the mechanical properties, dimensional stability and processability of PCT under humid conditions. Therefore, PCT can compete with many polymers such as PPS, LCPS, and high-temperature polyamides. PCT has good chemical resistance to cleaning solvents, such as acetone, methyl ethyl ketone, ethanol and aromatic solvents.
