## Abstracts

According to our (Global Info Research) latest study, the global Plastic Strapping Materials market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Plastic strapping are available in different types of materials such as polypropylene, polyester and composite. Plastic strapping materials find application in various industries such as food & beverages, automotive, transportation & logistics, building & construction, textile and others.

Plastic strapping materials market has witnessed continuous growth from past three years owing to an economical and secure unitizing solution for strapping as compared to steel strapping. Due to sharp edges of steel strapping, it is difficult to handle manually and can be hazardous to an individual who is engaged in strapping operation. Plastic strapping materials are easy to handle and can be removed or attached manually.
