Abstracts

According to our (Global Info Research) latest study, the global Polyethersulfone market size was valued at USD 419.6 million in 2023 and is forecast to a readjusted size of USD 578.3 million by 2030 with a CAGR of 4.7% during review period.

Polyethersulfone (PES) has an outstanding ability to withstand exposure to elevated temperatures in air and water for prolonged periods. Even though PES is high-temperature engineering thermoplastic, it can be processed on conventional plastics processing equipment. Polyethersulfone (PES) is an amorphous, transparent, and pale amber high-performance thermoplastic and is the most temperature resistant transparent commercially available thermoplastic resin. It has relatively high water absorption. Stable solutions can be made if solvents are correctly chosen.

Overall economic performance will continue to be the best indicator of future demand for Polyethersulfone. Demand in most downstream markets is greatly influenced by general economic conditions. The competition among vendors will increase during the forecast period. Vendors will compete to deliver competitive advantages in the market on the basis of pricing, value-added benefits, and service portfolios. During the forecast period, we expect this competition to intensify with an increase in product extensions.
