## Abstracts

According to our (Global Info Research) latest study, the global Polyester Type TPU Hose market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

TPU materials for tubes and hoses can be divided into polyester type and polyether type. Polyether type TPU has the advantages of toughness, high elasticity, impact resistance, hydrolysis resistance and low temperature resistance, while polyester type TPU has good tensile strength, good flexibility, abrasion resistance, solvent resistance, high temperature resistance and not easy to oxidize. Polyester TPU is produced by the reaction of polyester polyols and diisocyanates. The chemical structure of polyester polyols determines some key properties of TPU materials, such as high strength and high wear resistance.
