The global Polyester Vascular market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Polyester vascular refers to medical devices or components made from polyester material, specifically designed for use in vascular surgeries. Vascular surgeries involve the repair or replacement of blood vessels to treat conditions such as atherosclerosis, aneurysms, or peripheral arterial disease. Polyester is used in the construction of vascular grafts, which are artificial blood vessels used to bypass blocked or damaged vessels. These grafts are made from polyester yarn or sheeting and are capable of withstanding the high pressure and flow found in the cardiovascular system.
