## Abstracts

The global Polyether Block Amide (PEBA) market size is expected to reach \$ 529 million by 2032, rising at a market growth of -1.0% CAGR during the forecast period (2026-2032).

Polyether block amide or PEBA is a thermoplastic elastomer (TPE). It is a block copolymer obtained by polycondensation of a carboxylic acid polyamide with an alcohol termination polyether (Polytetramethylene glycol PTMG), PEG). The general chemical structure is:  $\text{HO} - (\text{CO} - \text{PA} - \text{CO} - \text{O} - \text{PE} - \text{O})_n - \text{H}$

PEBA is a high performance thermoplastic elastomer. It is used to replace common elastomers – thermoplastic polyurethanes, polyester elastomers, and silicones for these characteristics: lower density among TPE, superior mechanical and dynamic properties (flexibility, impact resistance, energy return, fatigue resistance) and keeping these properties at low temperature (lower than -40 °C), and good resistance against a wide range of chemicals.

Global Polyether Block Amide (PEBA) key players include Arkema, EVONIK, etc. Global top two manufacturers hold a share over 85%.

Europe is the largest market, with a share about 35%, followed by China, and USA, both have a share about 40 percent.

In terms of product, Polyamide 12 Elastomer is the largest segment, with a share over 80%. And in terms of application, the largest application is Consumer Goods, followed by Industrial Application, Medical Industrial, etc.
