Abstracts

The global Polyetheretherketone (PEEK) Film market size is expected to reach $ 277 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

PEEK film is a high-performance polymer film made from PEEK resin through drying, melt extrusion, cooling, shaping, and post-processing. Its core properties include long-term heat resistance up to 240°C, excellent mechanical strength and electrical insulation, strong chemical resistance, and biocompatibility. It can be customized to varying thicknesses and functions through processes such as extrusion casting and biaxial stretching. It is widely used in high-end industries such as aerospace, electronics, medical, and the automotive industry, serving as a key material for extreme operating conditions and precision requirements.

In recent years, with the increasing demand for high-temperature, high-frequency, long-life, and high-reliability materials in the electronics, automotive, battery, aerospace, and medical industries, PEEK film has become a key growth driver in the high-end film materials market. Companies such as Victrex and Syensqo (formerly Solvay), which have pioneered mature grades and large-scale film product lines, are leading the industry.

Victrex's APTIV™ series of films is a highly mature product in the market. Combining the inherent advantages of Victrex PEEK resin, such as heat resistance and chemical resistance, mechanical strength, and dimensional stability, APTIV film is widely used in the electronics, electrical, aerospace, and industrial sectors. APTIV film offers a wide thickness range (from thin to medium-thick), withstands extreme temperatures, provides excellent insulation, and offers tight thickness tolerances and wide-width film production

capabilities.

Syensqo's PEEK film grade is Ajedium™. Official data indicates that Ajedium™ PEEK film is used for insulating slot liners in electric motors and has passed 800V system testing, demonstrating superior fill factor and heat dissipation performance compared to traditional aramid paper.

Ultra-thin film will be a key trend in the future to meet the performance requirements of various consumer electronics (primarily smartphones).
