## Abstracts

The global Polyetheretherketone (PEEK) Tubing market size is expected to reach \$ 280 million by 2032, rising at a market growth of 3.1% CAGR during the forecast period (2026-2032).

In 2025, global Polyetheretherketone (PEEK) Tubing production reached approximately 6,100 km<sup>3</sup> with an average global market price of around US\$ 35 per meter, and a gross profit margin of approximately 10%-30%. Polyetheretherketone (PEEK) tubing is a high-performance thermoplastic tube (typically extruded, micro-extruded, or occasionally molded into short ?tube? geometries) made from PEEK resin to deliver mechanical stiffness, chemical inertness, and heat resistance in demanding fluid handling and structural applications. Compared with common engineering polymers, PEEK tubing maintains dimensional stability at elevated temperatures, offers excellent resistance to aggressive solvents and steam, and provides high pressure capability?reasons it is widely used as high-pressure capillary tubing in analytical instrumentation (e.g., HPLC) and as stiff tubing components in minimally invasive medical devices and catheter assemblies. Depending on use case, PEEK tubing can be supplied as single-lumen or multi-lumen, microbore/capillary sizes, thin-wall or heavy-wall constructions, and may be combined with secondary processes (cutting, flaring, printing/marking, forming). The PEEK tubing market is a niche but high-value segment within high-performance polymer tubing, shaped by two demand engines: (1) analytical/precision fluidics where high pressure, low extractables, and corrosion resistance are critical (notably HPLC/UHPLC capillary tubing), and (2) medical device manufacturing where stiffness, thin-wall capability, and tight tolerances support minimally invasive catheters and delivery systems. Suppliers compete less on commodity volume and more on process capability?micro-extrusion stability, multi-lumen complexity, thin-wall repeatability, and downstream operations (marking, forming, cleanroom handling, validation support). On the industrial side, PEEK tubing is used where PTFE-like chemical resistance is needed

but with higher structural strength and pressure capability; this is reflected in product positioning for chromatography and harsh chemical service.
