Abstracts

According to our (Global Info Research) latest study, the global Polyethersulfone for membrane market size was valued at US\$ 116 million in 2025 and is forecast to a readjusted size of US\$ 156 million by 2032 with a CAGR of 4.4% during review period.

Polysulfone resins are mainly used in the production of ultrafiltration membranes and reverse osmosis membranes. Polysulfone membrane is an important kind of water treatment membrane, but due to the hydrophobic surface of polysulfone membrane, it is easy to be polluted by organic matter such as protein during the membrane separation process, resulting in a decrease in its permeability and service life. Various methods are used to modify polysulfone membranes to improve their separation performance, such as surface impregnation modification, surface grafting modification, interfacial polymerization, etc. Polyethersulfone membrane (PES) has good hydrophilicity and flux, good chemical stability and inertness, alkaline PH stability, and high drug compatibility.

The global key manufacturers of Polyethersulfone for membrane include Solvay, BASF and Sumitomo, etc, top 3 manufacturers hold a share approximately 95%. Solvay is the world's largest Polyethersulfone for membrane manufacturer, with a market share of more than 50%. Europe, Asia Pacific and North America are the major Polyethersulfone for membrane market, they have a market share of more than 99%. North America is the largest market with a share of 42%. In terms of applications, Ultrafiltration Membrane is the largest downstream segment, with a market share of about 38%.
