Abstracts

In the process of polyethylene production, a small amount of oligomers will be produced, namely low molecular weight polyethylene, also known as macromolecular wax or polyethylene wax for short. Polymer wax is a non-toxic, odorless, non-corrosive, white or slightly yellowish solid with a relative molecular mass of 1800-8000. It can be made into blocks, flakes and powders as required. Polyethylene wax is a kind of lubricant and release agent with good external lubrication. Adding it to rubber and plastics can improve processing efficiency, improve the surface gloss and wear resistance of products, and help fillers and pigments. dispersion.
