According to our (Global Info Research) latest study, the global Polyethylene Wax Micronization market size was valued at US\$ 378 million in 2024 and is forecast to a readjusted size of USD 470 million by 2031 with a CAGR of 3.2% during review period.

Polyethylene wax is a low molecular weight polyethylene polymer that is used for improving and enhancing the process parameters and properties of the finished products in diverse applications in the plastic industry.

Micronized polyethylene wax is the product of polyethylene wax after micronization processing. During the production of polyethylene, a small amount of oligomers, namely low molecular weight polyethylene, is also produced, which is also called high molecular wax and abbreviated as polyethylene wax. Because of its excellent cold resistance, heat resistance, chemical resistance and abrasion resistance, it has been widely used.
