Abstracts

The global Polyfunctional Acrylate Monomer market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Multifunctional acrylate monomers refer to acrylate monomers with multiple functional groups (polyfunctional groups), where the functional groups usually refer to reactive functional groups, such as double bonds. These multifunctional acrylate monomers play a key role in polymerization reactions because they can introduce cross-linking points and change the structure of the polymer, thereby affecting its properties. These monomers are usually used to prepare polymer materials with specific properties, such as coatings, adhesives, photocurable resins, etc.
