## Abstracts

The global Polyimide Bearing Cage market size is expected to reach \$ 422 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032). In 2025, global production of polyimide bearing cages is expected to reach approximately 12.85 million units, with an average selling price of around USD 16.8 per unit. Polyimide bearing cages are critical components made from high-performance polymer materials (such as PI, PAI), primarily used to maintain spacing between rolling elements, guide their motion, and reduce friction and wear. Polyimide materials offer high temperature resistance, chemical corrosion resistance, low friction, and self-lubrication, making them ideal for high-speed, high-load, and high-temperature applications. They are widely used in aerospace, electric motors, electric vehicles, precision machinery, and high-end industrial equipment, serving as an essential part of high-performance bearings.

Currently, the market for polyimide bearing cages is in a growth phase, with demand primarily driven by aerospace, electric vehicles, high-speed motors, and high-end industrial machinery. From a market perspective, manufacturers are relatively concentrated, with core competitiveness focused on high-performance material selection, precision machining, and high-temperature performance control. In terms of trends, the industry is moving toward higher temperature resistance, lightweight designs, lower friction, and longer service life, while emphasizing reliability and safety in high-end equipment. Market perspectives suggest that with the rapid development of high-end motors, aerospace, and new energy vehicles, demand for high-performance polymer bearing cages will continue to rise, with significant potential in mid-to-high-end bearing segments.
