## Abstracts

According to our (Global Info Research) latest study, the global Polyimide Monomers market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Polyimides are mainly synthesized from dibasic anhydrides and dibasic amines. Compared with many other heterocyclic polymers, such as polybenzimidazole and polyquinoline, these two monomers have a wide source of raw materials and are relatively easy to synthesize. There are many kinds of dianhydrides and diamines, and polyimides with different properties can be obtained by different combinations.
