Abstracts

The global Polyimide Monomers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Polyimides are mainly synthesized from dibasic anhydrides and dibasic amines. Compared with many other heterocyclic polymers, such as polybenzimidazole and polyquinoline, these two monomers have a wide source of raw materials and are relatively easy to synthesize. There are many kinds of dianhydrides and diamines, and polyimides with different properties can be obtained by different combinations.

This report studies the global Polyimide Monomers production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Polyimide Monomers, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
