According to our (Global Info Research) latest study, the global Polyketone Resin market size was valued at USD 66 million in 2023 and is forecast to a readjusted size of USD 82 million by 2030 with a CAGR of 3.3% during review period.

Polyketone resin is a colorless or slightly yellow aldehyde resin. It is insoluble in water and soluble in most organic solvents. It has good compatibility with the raw materials in paint/ink formulations and has excellent anti-yellowing properties. . It is mainly used as a grinding resin for general color pastes and used in paint/ink formulations. It has good color development and can effectively improve the adhesion, hardness, gloss, solid content and fullness of the paint film. It is a multifunctional coating/ink additive.

Owing to their excellent mechanical properties, thermoplastic polyketones have found diverse industrial applications ranging from fibers, fire-retardant materials, and film coatings to membranes, packaging materials, and adhesives. Synergists like SIL and ZB were employed to achieve the same and improved flame retardancy qualities while minimizing the degradation in mechanical and impact capabilities. The cone calorimeter test, measurement, and limiting oxygen index (LOI) test were used to assess the flame retardancy of Pakistan-Occupied-Kashmir-based composites.
