## Abstracts

The global Polylactic Acid Anti Adhesion Film market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Polylactic acid (PLA) anti adhesion membrane is a biodegradable membrane used in medical applications to prevent tissue and other biological materials from adhering to medical devices during surgery. It is made from a biocompatible polymer called polylactic acid, which comes from renewable resources such as corn starch, sugarcane, or cassava. PLA anti adhesion film is used as a barrier between medical equipment and surrounding tissues to prevent the formation of adhesion. When tissue adheres to foreign objects such as surgical instruments or implants, adhesion can occur. Adhesion can cause complications such as pain, inflammation, and organ or tissue blockage. The use of PLA anti adhesion film helps to reduce the risk of adhesion formation and improve the prognosis of patients. It is usually used for surgical procedures such as abdominal surgery, gynecological surgery, and orthopedic surgery. PLA anti adhesion film is biodegradable and will not leave any harmful residue in the body. It is also non-toxic and will not cause any adverse reactions in the body.
