According to our (Global Info Research) latest study, the global Polylactic Acid Suture market size was valued at US\$ 21.7 million in 2024 and is forecast to a readjusted size of USD 30.8 million by 2031 with a CAGR of 3.3% during review period.

Polylactic Acid (PLA) sutures are biodegradable and synthetic sutures derived from lactic acid, a renewable resource. They are commonly used in various surgical procedures, including general surgery, plastic surgery, and obstetrics/gynecology. PLA sutures are absorbed by the body through hydrolysis, eliminating the need for removal. They offer good tensile strength and knot security, making them reliable for wound closure. Different types of PLA sutures are available with varying absorption rates to suit different surgical needs.

The polylactic acid (PLA) suture market is experiencing steady growth driven by the increasing preference for bioabsorbable sutures over traditional non-absorbable ones. A key trend is the development of PLA sutures with improved properties, such as enhanced tensile strength, knot security, and pliability for easier handling. Researchers are also exploring modifications to control the degradation rate of PLA sutures to better match the healing time of different tissues. Another trend is the growing use of PLA sutures in minimally invasive surgical procedures, where their absorbability reduces the need for secondary procedures to remove sutures. The increasing focus on patient comfort and reduced recovery times is also contributing to the demand for PLA sutures. Furthermore, the development of new manufacturing techniques, such as melt spinning and extrusion, is improving the quality and consistency of PLA sutures. The integration of antimicrobial agents or other therapeutic substances into PLA sutures for localized drug delivery is also an area of active research. The market is also seeing a push for

more sustainable and eco-friendly manufacturing processes for PLA, further enhancing its appeal. This trend is expected to continue as the demand for advanced wound closure solutions increases.
