Abstracts

Polymer based thermal interface materials (TIM) are polymer based materials used for supporting heat sink to remove heat from the heat sources in various equipment. They are generally used in the form of a secondary thermally conductive material to replace the thermally insulating air between the two surfaces. Besides helping in the efficient transfer of heat, TIM also act as adhesives and strengthen the mechanical link between surfaces. Polymer-based TIM are the most commonly used TIM, and owing to their superior conductive and adhesive properties, they find extensive usage for thermal management applications in various industrial sectors, including electrical and electronics, telecom, and automotive.

Scope of the Report:

This report focuses on the Polymer Based Thermal Interface Materials (TIM) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Polymer based thermal interface materials (TIM) include many forms. And each form has different application industries with price difference. With thermal conductive effect of polymer based thermal interface materials (TIM), the downstream application industries will need more polymer based thermal interface materials (TIM) products. So, polymer based thermal interface materials (TIM) has a huge market potential in the future. Manufacturers are trying to produce good performance polymer based thermal interface materials (TIM) through improving technology.

The major raw materials for polymer based thermal interface materials (TIM) products are silicone, alumina, plasticizer and other auxiliary materials. Fluctuations in the price of the upstream product will impact on the production cost of polymer based thermal interface materials (TIM). The production cost of polymer based thermal interface materials (TIM) is also an important factor which could impact the price of polymer based thermal interface materials (TIM).

The worldwide market for Polymer Based Thermal Interface Materials (TIM) is expected to grow at a CAGR of roughly 1.8% over the next five years, will reach 810 million US\$ in 2023, from 740 million US\$ in 2017, according to a new GIR (Global Info Research) study.
