According to our (Global Info Research) latest study, the global Polymer Bearing market size was valued at USD 8053.3 million in 2023 and is forecast to a readjusted size of USD 9502.8 million by 2030 with a CAGR of 2.4% during review period.

Plastics offer many advantages over other common bearing materials. Plastics are extremely corrosive resistant and most are chemically resistant.

Plastic bearings do not transfer heat to other areas of the mechanical assembly. Many plastics are even self-lubricating and therefore eliminate the possibility of failures from lack of maintenance.

The Asia-Pacific region led the global polymer bearing market in 2017, owing to the rise in demand for polymer bearings from varied end-use industries such as automobile, textile, food processing, medical & pharmaceutical, packaging, and chemical in this region. China, India, and Japan are leading countries in terms of production and consumption of polymer bearings in the Asia-Pacific region.
