According to our (Global Info Research) latest study, the global Polymer Capacitor market size was valued at USD 2514.8 million in 2023 and is forecast to a readjusted size of USD 4241 million by 2030 with a CAGR of 7.8% during review period.

A polymer capacitor, or more accurately a polymer electrolytic capacitor, is an electrolytic capacitor (e-cap) with a solid electrolyte of a conductive polymer. Polymer electrolytic capacitors are characterized by particularly low internal equivalent series resistances (ESR) and high ripple current ratings. Their electrical parameters have similar temperature dependence, reliability and service life compared to solid tantalum capacitors, but have a much better temperature dependence and a considerably longer service life than aluminum electrolytic capacitors with non-solid electrolytes. In general polymer e-caps have a higher leakage current rating than the other solid or non-solid electrolytic capacitors. Polymer electrolytic capacitors are mainly used in power supplies of integrated electronic circuits as buffer, bypass and decoupling capacitors, especially in devices with flat or compact design. Thus they compete with MLCC capacitors, but offer higher capacitance values than MLCC, and they display no microphonic effect.

Global Polymer Capacitor key players include Murata Manufacturing Co, NCC (Chemicon), Panasonic Corporation, Nichicon, Kemet, etc. Global top five manufacturers hold a share about 65%. China is the largest market, with a share about 40%, followed by Japan, with a share about 25 percent.
