Polymer composite copper foil refers to a material composed of a polymer substrate and a copper layer combined by an adhesive or other composite process. Polymer composite copper foil has the advantages of chemical corrosion resistance, good bending performance, easy processing, lightweight, and good electrical performance. It has broad application prospects in aerospace, consumer electronics, energy storage systems, and automobile manufacturing.

Polymer composite copper foil mainly includes PP composite copper foil, PET composite copper foil, PI composite copper foil and other types. PP composite copper foil is made of polypropylene (PP) as raw material, and has the advantages of lightweight, strong acid and alkali resistance, and moisture resistance, which can effectively improve the energy density of the battery; PET composite copper foil is made of polyethylene terephthalate (PET) as raw material, and has the advantages of high safety and reliability and low production cost; PI composite copper foil is made of polyimide as raw material, and its preparation is difficult, and large-scale production and application have not yet been achieved.
