Abstracts

The global Polymer Grouting Materials market size is expected to reach \$ 2897 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

Grout is a family of construction and industrial materials formulated to be pourable or pumpable so they can fill gaps, voids, joints, and sleeves/anchor pockets, creating a continuous load-transfer or sealing medium for baseplate bedding, anchoring, void filling, and leak/crack remediation. In 2025, global grout sales is about 8,000 kilotons/year, with an average ex-works price of roughly US\$900/ton, implying a market size of about US\$7.2 billion/year, with installed capacity around 12,000 kilotons/year and a typical materials gross margin of 18%–28%.

Upstream inputs include cement and mineral additives (e.g., silica fume, fly ash), graded sands and admixtures, plus resin binders and curing agents for epoxy/PU systems; midstream players formulate, blend and package (dry-bag cementitious or kitted resin systems); downstream delivery is executed on-site by civil contractors, industrial installation/MRO teams and infrastructure projects via mixing and pour/pump placement.
