Abstracts

The global Polymer Ion Mobility Spectroscopy market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Polymer ion mobility spectrometer is a fast, high-resolution particle size and mass analysis instrument for large protein molecules and their polymers, viruses and virus particles, lipoproteins, nanoparticle colloids, and other macromolecules. The powerful function of polymer ion mobility spectrometer lies in its ability to analyze polymers and nanoparticles beyond the range of mass spectrometry, and to achieve analysis accuracy and resolution that cannot be achieved by detectors based on light scattering technology. In addition, users can improve the efficiency of experimental workflow by using the optional automatic sampling system. Polymer ion mobility spectrometer is a powerful supplement to high performance liquid chromatography, FFF field flow fractionation, (AUC) analytical ultracentrifugal separation technology and mass spectrometry (MS) analysis technology.

This report studies the global Polymer Ion Mobility Spectroscopy production, demand, key manufacturers, and key regions.
