According to our (Global Info Research) latest study, the global Polymer Material Capillary Column market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Polymer material capillary columns are chromatography columns made of polymer-based materials such as polyethylene, polyvinyl chloride, or polydimethylsiloxane. They are utilized in gas and liquid chromatography to separate and analyze complex compound mixtures. Advantages include high thermal stability, chemical inertness, and low bleed, making them well-suited for separating polar compounds and analyzing diverse mixtures. These columns offer versatility, as their properties can be tailored to specific applications, and they are durable for long-term use due to their high mechanical stability and low water absorption. Overall, polymer material capillary columns are valuable tools for chromatography in various analytical settings.
